

# Resuspending primers

---

## Introduction

Protocol for resuspending primers.

## Materials

- › Primers
- › MQ H2O

## Procedure

### Resuspension

1. Centrifuge tube containing dried primers to spin them down.
2. Add H2O to reach a final concentration of 100 uM (volume specified in oligo synthesis report).
3. Vortex.
4. Incubate for 10 minutes at 50-60°C.
5. Spin down.
6. Make further dilutions for use into new tubes.
